Sprint Chassis
Manufactured in the United States
100cc/125cc/4-cycle Applications

MODEL: VKS12

Technology at work for you

A Chassis designed for American tracks on the new eco-friendly tires, that will just plain “do work”.

The challenge for us was simple, create a chassis that will work on tracks that do not rubber up like tracks overseas and will work with the new tires being used today at an affordable price.

The design took quite a while to perfect and not radical by any stretch of the imagination. We wanted it to be user friendly, quick out of the box, durable, and economical. What we got was all of that and more. We have a chassis that runs comparable lap times to the 5K dollar EURO models at just over half the cost. You be the judge, visit our web site to see the chassis in action.

Sleek appearance

In today's market, it is even more important to look professional both on and off the track.

At Victory Karts we understand that results off the track are just as important as those on the track. We use the finest components on our chassis which some are readily available at most kart shops. The sleek looks of the VKS12 and the high gloss powder coat applied to the frame make the kart a winner off the track as well as on.

Victory Karts has a full line of apparel including hats and racing suits to insure you look professional on and off the track.
